CODING SAMURAI
ESTD. 2023

ABOUT THE COMPANY

Coding Samurai is a pioneering EdTech startup founded in August 2022 with a mission to bridge the gap between academic knowledge and industry expectations, Coding Samurai offers a comprehensive ecosystem of IT services, technical training internships, and consultancy solutions designed to empower students, professionals, and businesses alike.

Our Vision

At Coding Samurai, we envision a future where practical skills and innovation drive success. Our mission is to equip aspiring tech professionals with real-world expertise and help businesses harness the power of technology to thrive in an ever-evolving digital landscape.

What We Do

Technical Internships for Aspiring Professionals. Our flagship technical internship programs are designed to provide hands-on learning experiences that go beyond traditional academics. Through live projects and mentor-led guidance, students develop a deep understanding of industry-relevant tools, technologies, and problem-solving approaches. From web development and data science to machine learning and game development, our diverse offerings cater to a wide array of technical domains, empowering participants to tackle real-world challenges confidently.

IT Services to Transform Businesses

Coding Samurai also offers a suite of IT services, enabling businesses to leverage cutting-edge technology for growth and efficiency. Our services include:

Website Development: Crafting responsive and high-performance websites tailored to business needs.
Mobile App Development: Designing intuitive apps for iOS and Android to enhance customer engagement.
UI/UX Design: Creating seamless user experiences through research-driven designs.
Graphic Design: Delivering compelling visuals that resonate with audiences.
Video Editing: Producing impactful videos to communicate powerful stories.

IT Consultancy Services

Our consultancy solutions empower organizations to streamline operations, improve efficiency, and achieve their business goals. With a focus on innovation, we guide businesses in adopting technologies that create value and drive results.

INSTRUCTIONS FOR SUBMISSIONS

1. Project Submission Form

A project submission form will be shared via email later. In the meantime, continue working diligently on your assigned tasks and projects.

2. Task and Project Requirements

- **Business Analytics Internship**: Complete **at least two projects** for successful completion of the internship. The projects can be from the same level or different levels, as per your preference.

3. Uploading Work to GitHub

- Create a GitHub repository named **"CODING SAMURAI INTERNSHIP TASK."**
- Upload all completed tasks or projects to this repository.
- The repository link will need to be submitted via the project submission form.
- For UI/UX Design Interns , they can upload their work on dribble or behance or any other design platfroms
- **SAMPLE GITHUB REPOSITORY**- GITHUB DEMONSTRATION

4. Create and Share a Demonstration Video

- Record a video showcasing your work. The video should demonstrate your efforts and contributions to the tasks or projects.
- Post this video on **LinkedIn** to build credibility and serve as proof of your work.
- Tag **Coding Samurai** in your LinkedIn post.
- Include the hashtag **#CodingSamurai** for uniformity and visibility. You may also use additional hashtags like **#Internship** and **#AppDevelopment** for greater reach.

- SAMPLE VIDEO SUBMISSION- Video demonstration

5. Utilize Online Resources

Feel free to use resources such as Google Search, online tutorials, and instructional videos to aid your learning and task completion.

6. Rewards for Outstanding Performance

The best interns will receive:

- A **Letter of Recommendation (LOR).**
- A chance to win a **stipend** for outstanding performance.
- **Feature recognition** on Coding Samurai's official page for exceptional contributions.

BUSINESS ANALYTICS

Level 1: Beginner (Basic Concepts and Skills)

Project 1: Sales Metrics Dashboard

- **Objective**: Create a basic sales performance dashboard for a small retail store.
- **Dataset**: A small, simple sales dataset with columns like Date, Product, Quantity, Price.
- **Tasks**:
    1. Calculate basic sales metrics like total revenue, average order value, and total sales.
    2. Visualize trends using basic line and bar charts (e.g., monthly sales trends).
    3. Identify the top 3 products by sales and visualize them in a bar chart.
- **Tools**: Excel or Google Sheets.

Project 2: Employee Demographic Analysis

- **Objective**: Understand the demographic distribution of employees in a company.
- **Dataset**: A small HR dataset with columns like Age, Gender, Department, Salary.
- **Tasks**:
    1. Analyze the distribution of employees across departments.
    2. Visualize the gender split and age distribution using pie charts and histograms.
    3. Identify the average salary by department.
- **Tools**: Excel or Google Sheets.

Level 2: Intermediate (Slightly More Involved)

Project 3: Monthly Sales Trends and Analysis

- **Objective:** Identify sales trends over time.
- **Dataset:** Medium dataset with columns like Date, Product, Quantity, Region.
- **Tasks:**
    1. Calculate monthly sales totals and display them in a line chart.
    2. Identify the best and worst months for sales.
    3. Analyze sales by region using a bar chart.
- Tools: Excel, Google Sheets, or Python (Pandas, Matplotlib).

Project 4: Employee Attrition Insights

- **Objective:** Analyze basic attrition patterns.
- **Dataset:** IBM HR Analytics Dataset.
- **Tasks:**
    1. Calculate the attrition rate.
    2. Visualize attrition by department using a bar chart.
    3. Identify the average age of employees leaving the company.
- **Tools:** Excel, Google Sheets, or Python (Pandas, Matplotlib)

Level 3: Advanced (Simplified)

Project 5: Sales Predictions Using Basic Models

- **Objective**: Predict future sales using trends.
- **Dataset**: Dataset with Date, Product, Quantity, and Price.
- **Tasks**:
    1. Perform basic trend analysis to project next month's sales.
    2. Visualize the trend using a line chart.
    3. Suggest adjustments based on observed trends.
- **Tools**: Excel, Google Sheets, or Python (Statsmodels).

Project 6: Movie Recommendation Based on User Ratings

- **Objective**: Build a simple movie recommendation system.
- **Dataset**: MovieLens Dataset (small version).
- **Tasks**:
    1. Analyze the most popular movies based on average ratings.
    2. Group movies by genre and visualize the count of movies per genre.
    3. Recommend top-rated movies in a specific genre to users.
- **Tools**: Excel or Python (Pandas, Matplotlib)

REFRENCE LINKS FOR HELP

Level 1: Beginner

Project 1: Simple Sales Metrics Overview

- **Video Tutorial**: Excel Sales Performance Metrics Dashboard
  This video demonstrates how to calculate basic sales metrics and create visualizations using Excel

Project 2: Basic Employee Demographics Summary

- **Video Tutorial**: How to Create a Simple Dashboard in Excel
  This tutorial shows how to design basic dashboards and analyze simple data

---

Level 2: Intermediate

Project 3: Monthly Sales Trends and Analysis

- **Video Tutorial**: Build an Interactive Sales Performance Dashboard
  Learn how to analyze sales trends over time and present findings effectively.

Project 4: Employee Attrition Insights

- **Video Tutorial**: Employee Attrition Analysis with Excel or Python
  (You can explore additional videos focusing on HR analytics and attrition datasets. Let me know if you need direct help locating such resources.)

Level 3: Advanced

Project 5: Sales Predictions Using Basic Models

- **Video Tutorial**: Time Series Forecasting Using Python (iNeuron)
  This video explains how to implement basic time-series forecasting using Python, covering essential libraries and techniques.

- **Video Tutorial**: Comprehensive Guide to Time Series Forecasting with Python
  A detailed guide that transitions from basic concepts to more advanced forecasting methods like ARIMA.

Project 6: Movie Recommendation Based on User Ratings

- **Video Tutorial**: Python Collaborative Filtering Tutorial (codebasics)
  This tutorial introduces collaborative filtering and demonstrates how to build a movie recommendation system step by step.

- **Video Tutorial**: MovieLens Recommendation System | Python Playlist
  A playlist providing comprehensive coverage of recommendation systems using the MovieLens dataset and Python

Purpose of the Internship: Learn and Grow

Autonomy and Responsibility

We respect your independence. It is entirely your decision whether to seek guidance or proceed on your own.

Challenge and Professionalism

The tasks assigned may appear simple or complex. Regardless, we expect you to approach them with professional diligence and dedicate the necessary attention they deserve.

This internship is designed to foster learning, growth, and practical experience.
